

What to expect if you're referred for a scan...

- Convenient, safe, state-of-the-art imaging technology
- Reliable, precise information to improve your care
- Excellent service to Metro Atlanta-area dentists and dental specialists since 2007

"Radiation exposure with our scans is 10 times less than scans using a medical-grade CT scanner."

Why doctors prefer CT scans

CT scans are becoming the standard of care in dentistry. The i-CAT® (shown on the next page) is an upright machine that offers more accurate information for dental practitioners.

CT scans are superior to conventional two-dimensional (2D) dental x-rays and help doctors:

- Visualize parts of the anatomy that cannot be seen with the naked eye or conventional dental x-rays
- Accurately locate the vital structures in the upper and lower arches
- Properly diagnose and treat patients
- Provide the best professional treatment

What patients say about the service...

"This note is to thank you for going the extra mile. I appreciate you coming to my office for my scan, it saved me so much time. You provided a great service for me and helped me to get excellent dental care."

- TC, McDonough, GA

"I had an excellent experience with MobileCAT. The process was simple, customer service was great and so convenient that I didn't have to take much time away from work."

- BS, Atlanta, GA

How it works...

We have streamlined the scanning process to make completing a scan as simple and trouble free as possible. Our process can save time and reduce the stress accompanied with completing a traditional scan.

Dentist

Completes new dentist registration patient referrals.

Confirms availability. Schedules scan.
Completes scan. Collects fee.
Delivers scan to dentist

The i-CAT

Cone Beam Computed Tomography (CBCT) or Dental Volume Tomography (DVT) scanners (such as the i-CAT) utilize a cone beam, which radiates from the x-ray source in a cone shape, encompassing a large volume with a single rotation about the patient. Images are then reconstructed using algorithms to produce 3-dimensional images at high resolution.

"The i-CAT offers effective treatment planning for all specialties with fast scan and reconstruction rates..."

-American Dental Association (ADA),
ADA Dental Product Guide

Preparing for your scan...

Very little preparation is needed for a CT scan. As part of the procedure, you will remove anything that might interfere with the imaging. Patients typically need to remove the following items:

1. Dentures and other removable appliances*
2. Jewelry worn above neck—earrings, necklaces
3. Hearing aids
4. Piercings
5. Hairpins
6. Eyeglasses

* Unless specified by the referring doctor
